

# Rehabilitation Following Unilateral Patellar Tendon Repair

I. Immediate Postoperative Phase (Days 1-7)

Goals: Restore full passive knee extension

Diminish pain and joint swelling

Restore patellar mobility

Initiate early controlled motion \*Controlled forces on repair site

Postoperative Days 1-4

Brace: Drop locked brace locked at 0° extension with compression wrap

Sleep in brace, ambulate in brace

• Weight bearing: Toe touch-25% BW WB with crutches, brace in full extension

• Range of motion: 0-30°

CPM 0-45° as tolerated

Exercises: Ankle pumps

Quad sets

Patellar mobilization Hip abd/adductions

• Ice and elevation: 20 minutes of each hour at elevate

## Postoperative Day 4-7

Continue use of brace (sleep in brace locked)

Weight bearing: Locked brace two crutches, continue toe-touch-25% WB

Range of motion: 0-45°

CPM 0-75° as tolerated

• Exercises: Continue all listed exercises

Initiate gravity eliminated SLR flexion (assisted)

Continue ice and elevation

## II. Maximum Protection Phase (Weeks 2 to 6)

Goals: Control forces on healing tendon

Gradually increase knee flexion Restore full passive knee extension

Restore patellar mobility Retard muscular atrophy

## Week 2:

• Brace: Continue use of locked brace (4-6 weeks)

Sleep in brace (4-6 weeks)

• Weight bearing: WBAT (usually 25-50% BW)

Range of motion: PROM knee flexion only 0-60°

Full passive knee extension

Patellar mobilization

Exercises: Electrical muscle stimulation to quads

Quad sets Ankle pumps

Hip abd/adductions

Gravity eliminated SLR flexion

Continue ice, elevation and compression

## Week 3:

Continue above mentioned exercises

ROM: 0-75°

Continue use of two crutches – 75-80% BW

## Week 4:

Continue all exercises listed above

Weight bearing: Progress to WBAT

PROM: 0-75°

Exercises: Initiate mini-squats (0-45°)

Initiate weight shifts

Initiate proprioception drills

## Weeks 5-6:

Discontinue use of crutch at 5 weeks postop

Unlock brace for ambulation at 6 weeks

Range of motion: PROM

> Week 5: 0-80° Week 6: 0-90°

Exercises: Initiate pool exercise program

Active knee extension 90-30°

Multi-angle isometrics knee extension (subnex)

Continue all exercises listed above Initiate anti-gravity SLR flexion

Continue ice, compression and elevation as needed

#### III. Moderate Protection Phase (Weeks 7-16)

Goals: Control forces during ambulation and ADL's

Progress knee flexion ROM

Improve lower extremity muscular strength Restore limb confidence and function

## Weeks 7-10:

Use postop brace unlocked for ambulation until 7-8 weeks Brace:

> (or until determined safe) Discontinue sleeping in brace

Week 7: 0-95/100° Range of motion:

Week 8: 0-100/105° Week 10: 0-115°

Exercises: \*Gradually increase muscular strength

Straight leg raises (flexion)

Hip abd/adduction Knee extension 90-0

½ squats
Leg press
Wall squats
Front lunges
Lateral lunges
Calf raises

Hamstring curls (restricted ROM)

Proprioception drills

Bicycle

Pool program

## Weeks 12-16:

Range of motion: Week 12: 0-125°

• Exercises: \*Continue all exercises listed above

Initiate lateral step-ups Initiate front step-downs Initiate backward lunges

Walking program

\*No sports!

# IV. Light Activity Phase (Months 4-6)

Goals: Enhancement of strength, endurance

Initiate functional activities

Improve tensile strength properties of tendon

• Exercises: Continue strengthening exercises

Continue emphasis on eccentrics and functional exercises

\*May initiate plyometrics (month 5)

\*May initiate agility drills (lateral shuffle) month 5

\*If appropriate!

\*May initiate light running months 5-6

## V. Return to Sport Activity Phase (Months 7-9)

## Criteria to Return to Activities:

- 1. Satisfactory clinical exam
- 2. Satisfactory strength
- 3. Proprioception test 80% > of opposite leg
- 4. Appropriate rehab progression

Goals: Gradual return to full-unrestricted sports

Continue strength program Continue functional/agility drills

Exercises: Continue strengthening exercises

Continue agility program

Continue sport specific training
